ABOUT US

Metal has transformed the world we live in. It is appreciated beyond utility and has inspired craftsmanship and artists to produce lasting structures and great works of art. When design transcends form and function by challenging the norms, by establishing a unique identity and aesthetic, then art is born and the craftsman that create these valued artifacts are known as Metal Smiths.

Macki Metal Smiths blend traditional craftsmanship with state-of-the-art manufacturing facilities to produce functional, durable products, guaranteed! With a lifetime of knowledge in manufacturing metal tools our team brings you locally made affordable products that provide a competitive and compelling alternative to manage supply chain risk. Macki have premises in Boksburg with Laser cutting and robotic welding capabilities in addition to forming and heat-treating facilities.

SHOVELS & SPADES

TOOLS CATALOGUE

THE SPAVEL™

Macki is proud to introduce a market first. The Spavel is a hybrid tool combining the functionality of a Shovel and a Spade in one simple very durable tool. Essentially shovels are made for scooping and spades are made for digging. But why not have the best of both in one tool? The Spavel has a flat blade to provide a cutting edge with which to dig into hard ground as when digging a foundation trench. This flat blade is also ideally suited to mixing cement. It has higher sides (commonly associated with a shovel) that taper to the cutting face. These sides allow a greater carrying capacity. The cutting edge is sharpened and heat treated. The combination of features provides a product that is unique in design and functionality to existing shovels and spades commonly used. The Spavel allows you to have one tool best suited for multiple applications, reducing costs while improving efficiency. The Spavel design and trademark are intellectual property of MacCorkindale Investments (Pty) Ltd and are protected by South African Design No. F2021/01487 and South African Trademark No 2021/37098
